*Week 9/23: 6.5M

Total : 254.5M so far traded

304-251.3M = 52.7M to trade before boom, almost there.

thesis is 1 cycle of trading must reveal major anomaly in dividend distribution and so forth. dividend is return of capital where it churns out every cycle if short bets go bad or EPS is positive. GME

Few Points:

This is the longest time 8 weeks so far still full outstanding shares are not traded.

MACD turned green, the shares left to be traded to complete a cycle is in the field of shorted /Borrowed shares

Lowest volume , on path lowest Volume week, could drop to thousands can't deny
