So my intentions are, like the tittle says , to try to find out ... not how many shares sold short exist (we know they must be in the millions... (they keep on shoting and shorting so the price showed keep going down and people to loose hope and sell), I just want to know how many shares were shorted since the beginning of 2022... using only the volume of shares traded and the short % of each trading day, can some wrinkled brain ape tell me where to obtain these numbers ?

Yes, I know I could go all the way back since the sneeze... but ... just want to have a sample ... and to know how f**** hedgies are .

Thank you in advance for all the help provided,

euro(poor) ape here (... well... according to my currency that is actually true)

don't stop, can't stop , GAMESTOP
