I have the gamestop wallet as both the browser extension and for ios. I'm just wandering if anybody else has this issue.

In the browser extension wallet, i have a few nfts bought directly from the gme marketplace. I think like 7 in total. The rest of my nfts are from the superstonk sub and some are just random airdrops that i didn't drop my wallet address for. My issue is, in the ios wallet, all of my legitimate gme marketplace nfts don't show up at all. They are the only ones that are omitted from the collectables tab. All the other nfts that didn't originate from the marketplace still show up.

I'm just wandering if anybody else has this issue and if there is a solution? I'm just a little irked by it lol. The few nfts that i pay for should definitely be in my wallet imo
