In the following text, I would like to show you what would have happened if Apple shares had been bought in 2004 and not sold until today. Maybe history repeats itself and we get a better one occasionally with our favorite stock gamestop.

For my example calculation, why we don't need to sell at all, I would like to take Apple as an example, because...

In the following example, I show you what would have happened if you had bought 1000 Apple shares on 01/28/2004 and kept them until today.

sometimes you should decide between these two options

it is **01/28/2004** and you decide to buy 1000 apple shares for \$0.42 each. your goal is to never sell these shares again. diamond hands

1000 Shares * \$0.42 = \$420 (lol)

`---After 1 Year ---`

It is the **02/28/2005** more than one year passed and Apple shares a stock split of 2:1. Now you have instead of 1000 pieces whole **2000 pieces**.

`--- After 7 Years ---`

Now almost 7 years pass without any special events except for normal price increases, which are of no interest because you never want to sell.

On **08/09/2012** apple announces to pay diviende.

`--- After 2 Years ---`

another 2 years have passed and on **06/09/2014** apple announces another split of 7 to 1. Now you have **14000 shares**.(WOW)

`--- After 6 Years ---`

after another 6 years and many diviends, another split of 4 to 1 is coming on **08/31/2020**. now you have a total of **56000 shares**.

In the following diagram, I show you how the diviend has changed with the splits or shares.

Your one-time investment of ***\$420*** has turned into approximately ***\$8.7 million*** over time, earning you a total of ***\$141,430 in dividends*** over that time.

I hope I could show what holding can make. Therefore, register your shares in your name and hold them.

this is not a financial advice

I just love this stock and I love to DRS my shares and I love to hold them forever <3
