Background:

The GME marketplace has now expanded from LRC to include IMX.

Without zkevm live, those two protocols remain entirely separate with no way to trade between them but are both accessible by the GME wallet.

IMX requires you have IMX to trade content and has no way to obtain IMX via token trading on their protocol.

LRC provides access to trade tokens so it is easy to go from USDC/ETH/LRC/WBTC/etc to IMX however then you have IMX on LRC which isn't IMX on IMX, therefore not spendable on IMX.

Question:

What is the best method to get IMX from LRC L2 to IMX L2?
