Hello there Apes, this is not a financial advice, i like to smoke and watch the crayons in the interval of 1 min in our beloved stock everyday, all day.

So here comes some speculation that you would like to add some opinions anyway i'll be fast explaining this.

Here are some of the short volumes reported by chartexchange for your checking:

[As you can see, since we hit October, short volume reported has been over 60%, some days over 70% of all the volume trade, also the volume this days is a bad comedy joke, where a company with 302,974,737 shares, has a 7% decrease in value with 1.5m volume, numbers dont coincide, but here's a clue.](<https://preview.redd.it/sxkqgkk2atu91.png?width=238&format=png&auto=webp&s=881e1638117ff323ee638c9323b55dee751ab257>)

When we are about to hit close, happen this things:

[Also in the same moment we reach the after market comes a red crayon that someway erases this.](<https://preview.redd.it/5moe5otz9tu91.png?width=1140&format=png&auto=webp&s=3f368238bd8bd7ea992f5fbc220be1ae02b23914>)

sometimes happens this also:

[Calling all apes with wrinkled brains here, i can remember I have heard about a rule that permits the hedge fucks to put some short trades as long in the after hours market.](<https://preview.redd.it/hiu2d6r9btu91.png?width=1110&format=png&auto=webp&s=041db9ef3429a4aac343fc562c55712472ace36d>)

So basically the theory is that there are no more shares available, all the volume is from swaps of ETFs and before the close they close some shorts to lower the daily short volume and this could be a symptom of a 100% short volume or more, discounting the purchases that go to Computershare.

TLDR; Hedgies are fukt. BUY, HODL, DRS.

Please comment your ideas and share for visibility, love you all apes!.
