Title: Anything to survive another day. They moved from pumping chinese ipo stocks to crypto shitcoins for collateral. Crypto subs seem to think these are some random p&d; groups. Little do they know

A dead shitcoin that had an ICO in 2017, SNM, suddenly pumped 20x (2000%) on Binance today.

DISCUSSION

Anything that pumps 20x in a few hours on a centralized exchange is very suspicious to me. If its a shitcoin pumping on a dex, it makes sense, but not on a cex Especially when it has a market cap over 10M before the pump and now has a market cap of 150M++. No one knows why its pumping, as its official website has not been updated for a long time. Suspiciously, the coin is almost exclusively tradable on Binance and binance did not delist even though the project is basically dead for a few years.
