Citadel is shorting U.S. government bonds, which will lead to the MOTHER OF ALL MARGIN CALLS and thus the financial meltdown of the global financial system

Citadel is playing the same criminal game with U.S. government bonds as it has with other meme stocks. This is possible because the Fed is offering free money in the repo and reverse repo market. Citadel has shorted the Treasury bond market beyond recognition using the repo market. Citadel owns a company called Palafox Trading and uses it exclusively to short sell and trade Treasury bonds. Palafox, in turn, manages - the Citadel Global Fixed Income Master Fund LTD. Total assets are over \$123 million, and 80% of that is owned by offshore investors in the Cayman Islands. Their reverse repo agreements are fully rehypothecated and they cannot repay their own repo agreements until someone pays them first. The entire global financial economy is built on a fractional reserve system that will very soon experience the mother of all market collapses.
