Linked Post Content:
This is going to be a pretty lengthy post, but I assure you it will be well worth the read. I suggest that if you don't have at least 30 minutes to an hour to go through this, you should come back later, it is a lot to take in. I spent the last 5 days straight digging into this, organizing the data, and making everything easy to understand for this post. I am sure there is probably some missing info and grammatical mistakes, so be kind, I can always edit this post to add it.

That said, tldr;

After careful analysis of the GME Token and all the transactions associated with it, it appears that it has all the markings of bailout for GME Shorts. The GME Token acted as a blockchain ledger to Trade Swaps prior to the January 21 Sneeze. The bailout money received didn't end up being enough to cover their short positions, so they were left with no choice but to shut down the buy button. The bailout was for up to $1 Trillion Dollars, of which $141.8 Billion Dollars was utilized.

HERE WE GO...

As many of you know there was GME token created right before the January 2021 Sneeze. At first glance one might just assume that this is just another pump and dump crypto scheme. However, after spending 5 days straight of digging into this thing, I have come to a complete and udder shocking conclusion. My findings after full analysis of this GME token was that it could only be one thing. **IT WAS A BACKDOOR BAILOUT SWAP AUCTION FOR SHORTS**. This mind sound crazy for on many levels, but I will show proof of how I came to this conclusion with pictures, transaction logs, and some simple math.

Before I explain how I came to this conclusion I want to give a little pretext to the events of the GME Token transactions. It is significant to note that the GME Token was created late in the day and trading was done throughout the middle of the night when most retail traders were in bed or spending time with their families. The timing of the GME Token's release and trading times is extremely suspect, almost like they didn't want anyone to know about it or to get involved. The token was created/minted on **1/26/2021 at 23:46 UTC, 6:46pm EST, and 3:46pm PST** as indicated by the Genesis Block. The first trade took place 6 minutes later, which is suspicious in its own right, but later in this post it will be shown to be an extremely relevant transaction. The majority of the other trading actually begins 13 minutes after the Token is created and continues for almost exactly 15 hours until an "INTERVENTION" takes place. This intervention happened on **1/27/21 at 15:45 UTC, 10:45am EST, and 7:45am PST** about 1 hour and 14 minutes after the major exchanges opened up for trading. The last trade before intervention was at **15:14 UTC, 10:14am EST, and 7:14am PST** about 44 minutes after market open. The 2nd to last trade happened 16 minutes prior to market open.

Before we start breaking down the transactions it is important to understand a few key details about the accounts and contracts involved with the trading. Any account that received GME Tokens by a "SINGLE" or by "MULTIPLE" transactions still **HOLDS THE SAME NUMBER OF TOKENS TO THIS DAY!** That means that whoever bought them never sold them even though the price was skyrocketing for the GME Tokens. Remember the very first transaction mentioned above, well based on their purchase price of the Tokens, if they sold any time before the intervention took place, they would have profited for a whopping

6500%. So why didn't they sell??? They didn't sell because it wasn't an actual trade, none of these were trades, they were ALL SWAPS and the GME Token was the ledger for those swaps. I will explain what these swaps were for in more detail later in this post. It is also, worthy of note that there were 207 unique addresses involved with all transactions of the GME Token. **EXACTLY 200 OF THEM SEEM TO HAVE RECEIVED GME TOKENS!!**

It is also quite interesting that all transactions for these swaps went through 2 different UNISWAP Contracts. All transactions were processed using the Uniswap Contracts **(UNISWAP V2: GME 2)** and **(UNISWAP V2: ROUTER 2)** making the sending addresses of the Tokens unavailable to view. Somebody clearly didn't want anyone to know the origins of the senders for these GME Tokens. For good reason too, this was huge bailout to the tune of $1 Trillion Dollars for GME Shorts. The $1 Trillion Dollars was cap for the bailout, but it looks like they only utilized $141.8 Billion of it. So why didn't they use the full $1 Trillion? Simple, because as the GME Tokens got swapped for Ethereum and the price kept going up, meaning that as the total bailout money increased so did the swap rate for Ethereum to GME Tokens. You can see from the log of Dex Trading Transactions that the rate almost non-stop increased until the final intervention. In other words, the swap rate for Ethereum was an increasing variable rate depending on the total bailout money utilization at that moment in time.

Lastly, before we dive into the details of the transactions keep this one thing in mind, that is the GME Token was not an exact dollar to dollar or share to share swap. After careful calculations, it was found that the original 10,000,000 GME were not correlated to shares or direct 1 for 1 in terms of dollars. The goal was to keep transactions of Ethereum and Dollar amount low so as not raise any alarm bells or pay a bunch of unnecessary gas fees. **THIS WAS A BLOCKCHAIN LEDGER FOR THE BAILOUT TO KEEP TRACK OF WHO OWES WHAT!!!**

Here are the swap rates that were calculated:

1 GME Token = $100,000

10,000,000 GME Token (100% of Supply) = $1 Trillion

Eth to GME Swap Rate: Variable From (1 Eth = 17,480 GME) to (1 Eth = 236 GME)

Trade = Swap = GME Token = Bailout Token

Now that you have a decent understanding of what was going on, lets walk through exactly what happened and some of the key events along the way.

https://preview.redd.it/x26zm3hdxd1a1.png?width=1612&format;=png&auto;=webp&s;=333a162047f0209 c535e85f0ed2ba22fa8264000

Here is the screen capture of the first sequence of events. You can see in **GRAY** when the Genesis Block was created for the minting of the GME Token. Next you can see the Address in **YELLOW** sends out 4 individual pools of bailout tokens for GME Shorts to cash in on. After the 4 transactions from **YELLOW** go through, you can see the First Swap Transaction take place, followed by 4 more transactions from **YELLOW**. So how did this first swap slip through before all the bailout tokens got disbursed? Well, because that particular GME Short was privileged, were probably upside down on their position more than most, and needed the bailout money at the lowest swap rate available. Any hunch who that might be? Who was down big time after the sneeze happened? Who got a big bailout by his Wall Street Buddies? How much were they bailed out for? Answer:

https://preview.redd.it/6n5x6cfr2e1a1.png?width=879&format;=png&auto;=webp&s;=912b153537859ddbc 0db1c65eca3537ef2683ba6

So, Melvin Capital got $2.75 Billion from Citadel and Point72...Wow, that's interesting that is the exact amount for the first transaction in GME tokens when converted to BAILOUT MONEY.

Here is the Math:

First Transaction = 27,486.46 GME Tokens

REMEMBER, from above that 1 GME Token = $100,000, Therefore

Bailout Total = 27,486.46 X $100,000 = $2,748,646,000 OR $2.75 BILLION DOLLARS

This also confirms that the GME Token was just a ledger for bailout money and the actual bailout was happening Offchain (Not on the blockchain) through other financial instruments. Although I did trace a wallet that had 70,000 Ethereum and liquidated it all on 5/20/21 and 5/21/21.

CONTINUING ON:

https://preview.redd.it/tpcg637b4e1a1.png?width=1612&format;=png&auto;=webp&s;=9fa85742600af15f7 fa37f7e49eb496d18a7d7b7

You can see that after all 8 Bailout Distributions took place that the normal Swap trading takes place for the rest of the GME Shorts. This normal swap trading continues for next 145 minutes until swap trading is SUDDENLY HALTED, and an intervention takes place.

https://preview.redd.it/mkhz53125e1a1.png?width=1712&format;=png&auto;=webp&s;=57368d7a6c5ad3 4545fb5d51c79d671894ab1ac7

Here you can see swap trading happened normally until **BLUE** intervened which is the **UNISWAP V2: ROUTER 2** and likely controlled by **YELLOW**. ETH Collateral was transferred out of the pool in exchange for the bailout money. The ETH was transferred from the **UNISWAP V2: GME 2** through the **UNISWAP V2: ROUTER 2**, to the **GME Token Creators Address (YELLOW)**. The Token Creator **YELLOW** then added liquidity back the pools to signal that trading of swaps may resume.

Intervention Stop was at 2:26 UTC, 9:26pm EST, and 6:26pm PST

Intervention Start was at 3:24 UTC, 10:24pm EST, 7:24pm PST

It is clear to see that some entity intervened to stop the swap trading and collect the current collateral. Then initiated a signal that swap trading can continue approximately 1 hour later. **SO WHAT AND WHY WAS A HALT TRIGGERED AT THAT MOMENT???** Well, you wouldn't believe me if I told you...But I'm going to tell you anyways. In order to understand the halt you must take into account the total number of swaps (bailout tokens) issued out at that current moment in time. Turns out the total combined bailout tokens issued after the 2nd to the last transaction before the halt was 1,234,505.46. When the last transaction before the halt went through it crossed a SWAP LIMIT THRESHOLD. After the last transaction before the halt, the total bailout tokens issued was 1,234,568.37.

So what **SWAP THRESHOLD LIMIT NUMBER** did it cross??? **NO JOKE, IT CROSSED A THRESHOLD OF 1,234,567.89...YES 1,234,567.89!!!!** You can't make this stuff!

Continuing on from the previous image you can see that once **YELLOW** added liquidity back into the pool that normal swap trading resumed again. Regular swap trading resumed for a little over 3 hours until there was intervention by **YELLOW** the **GME TOKEN CREATOR.**

https://preview.redd.it/90rrick1fe1a1.png?width=1572&format;=png&auto;=webp&s;=3e755960815089c23d1f9d0f75494122f2631345

Here it looks **YELLOW** transferred Ethereum collateral out of the pool and then transferred GME Tokens to an unknown wallet, which was essentially a gift of bailout tokens for NO ETH! This same account that received the gift was also found to have over 70,000 ETH in it until it was liquidated on 5/20/21 and 5/21/21. It appears that there was also a gift of bailout tokens to a second party, who's wallet traces back to several Sub-Wallets all only being used strictly between January 12th and January 29th. It also looks like the 2nd gifted party still wanted to swap some ETH for additional bailout Tokens because the gift was not enough to cover their short positions.

After that intervention normal swap trading continued until it closed.

https://preview.redd.it/3rigbnynhe1a1.png?width=1578&format;=png&auto;=webp&s;=b5c6e6746d14fc6f1311596b6ee6a56e27b7e514

Here you can see **BLUE** intervened again and trading halted. **YELLOW** never issued liquidity back into the pool, so all swap trading was now closed and halted. You can see that **YELLOW** then removed the last of the ETHEREUM COLLATERAL for the bailout tokens. There was also a very weird transaction that occurred 7 months later on 9/18/21 which I am still looking into.

Last Trade: 15:14 UTC, 10:14am EST, and 7:17am PST

Trading Halted: 15:45 UTC, 10:45am EST, 7:45am PST

Weird Trade: 9/18/2021, 15:59 UTC, 10:59am EST, 7:59am PST

My conclusion from digging into all this and processing the data in an unbiased fashion is that this was a bailout ledger using swaps. All the DD up to this point fits and plus RC has hinted at swaps A LOT. Also, the fact that all these transactions took place using a Uniswap Contract, IT HAS SWAP WRITTEN ALL OVER IT! So why was UNISWAP the primary avenue of these transactions?? Well, it looks like Citadel.One now has an extension in their platform to operate trades on UNISWAP, Pancake Swap, as well as others.

https://preview.redd.it/xg4jtymzme1a1.png?width=793&format;=png&auto;=webp&s;=8af3866884b964660f185270480b8dfe9ef75fc8

Was Citadel using this prior to the release to its customers? You can decide that one yourself.

In Conclusion I think the events prior to and after the January 21 Sneeze had to many coincidences for it to be nothing. Here is my opinion on what actually happened during that time. This bailout was orchestrated in the heat of the night right before the sneeze. The total dollars issued from the bailout tokens was $141.8 Billion and they thought this was enough to get things under control. Little did they anticipate retails resilience to hold with diamond hands. The following 2 days GameStop rocketed up more than they anticipated, more then the bailout money could pay, more than they have ever seen. Even after the bailout money proving not enough to end their nightmare, they were left with but ONE Choice...TURN OFF THE

BUY BUTTON! This however did not end their nightmare, it just prolonged it to an even greater inevitable nightmare!

ADDITIONAL RESOURCES:

[ALL MULTI-TRANSACTION WALLETS HAVE THE TOTAL SUM OF ALL TRANSACTIONS AND ARE STILL HOLDING ALL GME TOKENS](https://preview.redd.it/gajnqi60te1a1.png?width=1334&format;=png&auto;=webp&s;=833630c9262eefd7d4600c56f76e010bac6f8b70)

[ALL SINGLE-TRASACTION WALLETS AND ARE STILL HOLDING ALL GME TOKENS](https://preview.redd.it/e3jaguoote1a1.png?width=1332&format;=png&auto;=webp&s;=1c062341c4208d25b94a262f4ccbbda6136010ca)

This can be confirmed by comparing the current GME Token holders and matching up the wallet address to the transaction totals.
